

## QUALITY POLICY

Endeavor Engineering's quality policy is simple and unchanging, right first time with zero defects. This approach to manufacturing is the basis for continued success and sustainability within the industry.

World class standards are adopted within our business to provide our customers with the highest Quality, Health & Safety and Environmental standards that they demand.

Our quality management system is constantly reviewed for continuous improvement as required and set out within the international standard. This review is to ensure that our system not only meets the requirements now, but continues to do so in the future.

It is not our aim to simply meet customer expectations, we aim to use every opportunity to exceed them.
